DESCRIPTION OF THE PROJECT

GENERAL IDEA, VISION: Creating a characteristic and unique element in the city, in a form of a pedestrian and bicycle route with very lively and energetic colours. This element must be a frame for all the functions and activities designed between the roundabouts. In some areas, it will be only a pavement, but in the key areas its form will transform into spatial elements such as seats, “pavilions” or footbridges.

Along Powstania Warszawskiego avenue we will implement the element of green hills that will provide a natural acoustic barrier. We will keep the most of the parking spaces along the avenue, but we will create in every fifth space a green zone with trees.
